
Financial & Administrative Transformation

Within an import/export company, the Finance and Administrative department was facing a growing workload, heavy manual processes, and limited information availability. This situation slowed down business responsiveness, complicated decision-making, and mobilised significant resources on low-value tasks. The company needed a deep transformation to gain efficiency, reliability, and speed of execution.

To address these challenges, we worked in close synergy with the Finance, Operations, and IT teams to automate all management-control operations. The intelligent reconciliation of data from different sources enabled the generation of automated, clear, and immediately usable reports. In parallel, the automation of tax management made it possible to produce multiple VAT returns as early as the 4th day of the month, significantly improving process speed and reliability.

This transformation delivered substantial results: more than **50% reduction in administrative workload**, near-immediate availability of financial information, improved business responsiveness, a significant decrease in administrative costs, and a simplified, smoother functioning of operational departments.

Our contribution combines intelligent automation, operational insight, and a concrete focus on performance.
